Your Guide to
Implantable Collamer Lens
and a *Brighter Tomorrow*

WELCOME TO OCL VISION

At OCL Vision, we are committed to providing exceptional surgical care and lasting peace of mind with our range of advanced treatments. Whether you choose LASIK, PRK, LASEK, or SmartSight™ excimer laser correction for myopia (short-sightedness) and astigmatism or opt for the reversible EVO ICL™ correction made from biocompatible Collamer, we offer personalised solutions to meet your needs. We also recognise the importance of **making our treatments accessible to all**, which is why we provide flexible payment plans to suit your circumstances. We believe that financial considerations should never be a barrier to achieving clearer vision.

Vision is a precious gift that profoundly impacts our quality of life, and everyone deserves the opportunity to see more clearly without worrying about the cost. Our clinic was born from a collaboration between world-renowned, UK-trained eye surgeons, merging their successful practices to harness a wealth of resources. This fusion has enabled us to deliver **unparalleled surgical expertise alongside the latest technological innovations**. In 2024 we won the Laing Buisson Healthcare Award in the category of best

healthcare outcomes in the UK. When choosing a surgeon for eye surgery, the key is to find someone who puts your needs first, blending exceptional skill and dedication with a commitment to cutting-edge eye care advancements.

Our team comprises of leading surgeons known for their surgical excellence and compassionate approach to patient care. With comprehensive training in the UK and globally, specialising in cornea, cataract, and refractive surgery, our surgeons ensure you're in the safest possible hands, with a track record of over 75,000 successful procedures.

We consistently ensure you are fully informed about the treatments best suited to you, clearly explaining the nature of the surgery, its expected outcomes, and the entire treatment process. Throughout your journey, we provide reassurance and tailor our approach to meet your specific needs and achieve your vision goals.

Choosing OCL Vision means entrusting your eyes to experts who truly care about your vision and well-being, backed by a strong commitment to your long-term satisfaction with flexible payment options to ensure that our first-class eye care solutions are within reach for you.

IMPLANTABLE COLLAMER LENS

Following your detailed consultation and specialist tests with us at OCL Vision, we are delighted to confirm that you are suitable for Implantable Collamer Lens (ICL) surgery.

ICL is a truly transformative procedure, offering freedom from glasses and contact lenses for those with higher prescriptions or who may not be candidates for laser vision correction. ICL surgery was first performed in 1993 with over 3 million ICLs implanted over the last 30+ years. This advanced treatment involves placing a tiny, biocompatible lens inside the eye to correct vision without permanently altering the cornea or natural lens.

One of the standout benefits of ICL is its reversibility. The ICL cannot be felt or seen once implanted inside the eye.

ICL is minimally invasive, reversible, and designed to correct a wide range of prescriptions, including severe myopia or astigmatism. The procedure offers rapid recovery times, and its long-term safety and effectiveness are supported by extensive clinical studies over 30 years. Laser eye surgery can be performed on top of an ICL if one's prescription were to change over the decades or as an enhancement of the outcome if there is any residual prescription.

At OCL Vision, our surgeons are recognised for their precision and expertise, using state-of-the-art technology to ensure **optimal outcomes tailored to each patient.**

With one of the highest Trustpilot scores for eye care nationwide and a commitment to excellence, **you can trust us** to prioritise your vision, safety, and overall well-being.

About the SURGERY

EVO ICL™ surgery is an advanced vision correction procedure that uses a small, biocompatible lens to correct a wide range of refractive errors.

The EVO ICL™ lens made by Staar Surgical (USA) is designed to work with the eye's natural structures, offering clear, high-definition vision while leaving the cornea unchanged.

During the procedure, the surgeon creates a tiny, less than 3mm entry, through which the EVO ICL™ lens is gently inserted and positioned behind the pupil, in front of the natural lens. The incision is so small that it heals naturally without the need for stitches. This minimally invasive approach preserves the integrity of the cornea and avoids the complications associated with corneal reshaping, such as dry eye.

EVO ICL™ is suitable for treating myopia, hyperopia, and

astigmatism. The lens provides a precise and effective correction, improving visual clarity with long-lasting results. **The procedure is quick, typically taking around 20–30 minutes for both eyes,** and patients often experience rapid visual recovery with minimal discomfort.

One of the key benefits of EVO ICL™ is that it is a reversible procedure, allowing flexibility for future advancements in eye care and natural aging changes. **It's a safe, effective, and reliable option for patients seeking a life free from glasses and contact lenses,** with minimal disruption to the natural anatomy of the eye.

What do I need to do to PREPARE FOR TREATMENT?

You will need to:

- **Sign your consent form:** This can be completed electronically via the surgery pack sent to you through DocuSign at the time of booking. It also includes an explanation of your aftercare plan.
- **Bring sunglasses:** These will help protect your eyes and keep them comfortable on your journey home.
- **Avoid eye makeup:** Do not wear any eye makeup on the day of your treatment.
- **Remove contact lenses:** Stop wearing contact lenses for at least three days before your procedure.
- **Plan your journey home:** Arrange for someone to accompany you or pick you up after the procedure. As part of our elite concierge package, we can organise your travel and any accommodation need.
- **Download our free dropAdrop reminder app** from the App Store or Google Play. The app sends you notifications to make sure you never miss a drop of your essential aftercare drops.

What happens on THE SURGERY DAY?

- You can expect to be at the clinic for **up to three hours**.
- **Arrival and consent:** Upon your arrival, we will welcome you to the clinic and confirm that you have signed the consent form.
- **Pre-surgery consultation:** You will have a consultation before the procedure, during which your surgeon will answer any questions you may have.
- **Aftercare discussion:** A nurse will guide you through the aftercare process, explaining how to care for your eyes immediately after surgery and in the days that follow. You will receive your aftercare drops, along with clear instructions on their usage to promote optimal recovery and healing. Additionally, we will inform you about your two main **follow-up appointments**, which are already scheduled for **2 week after surgery**. Should you feel the need for additional follow-ups, you are welcome to book them at no extra cost for up to one year after your procedure.
- **Surgeon's check:** Your surgeon may examine your eyes prior to the procedure to ensure everything is in order.
- **The procedure:** The surgery itself is carried out in the lens suite and typically takes around 20 minutes for both eyes.
- **Post-surgery relaxation:** After the procedure, you'll rest in the relaxation suite for 10–15 minutes.
- **Final check:** Before you leave, we will ensure everything is as it should be and send you home with your sunglasses on.
- **Returning to work:** While you may feel well enough to return to work the next day, we recommend taking it easy and having a light day to allow for proper recovery.

Considering Implantable Collamer Lens surgery?
Here is some guidance that will answer some of your questions.

After 24 hours

SHOWER/ WASH HAIR

Do not wet your eyes
directly for 1 week

Do not wear eye
make-up

3 days

CONTACT LENSES

Remove contact lenses.
Take surgeon's advice

After 5 days

LIGHT EXERCISE

Full exercise 2 weeks
after treatment

1 week

FLY

Take advice from
your surgeon

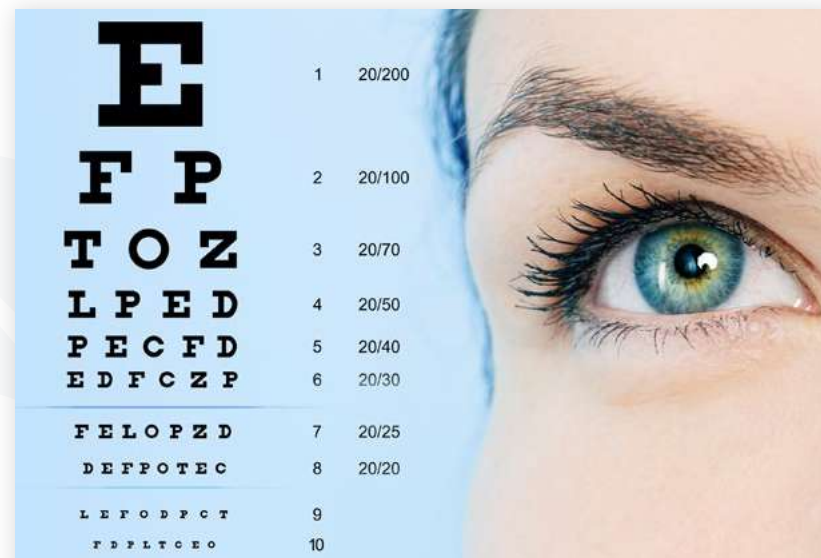

3 hours

TIME IN CLINIC

You can expect to be at the
clinic for up to 3 hours

NOTE: Timings may vary depending on your individual circumstances,
please check with your surgeon.

20/20 VISION CHART EXPLANATION

The 20/20 vision chart helps assess your visual acuity, measuring how clearly you can see letters or symbols from a distance of 20 feet.

If your vision is 20/20, you see what someone with normal vision sees at 20 feet. But if it's 20/40, you need to be 20 feet away to see what others see at 40 feet.

The chart has rows of decreasingly sized letters or symbols. Some people have sharper vision than 20/20, like 20/15 or even 20/10, **achievable with modern vision correction techniques** like laser eye surgery. For instance, if someone has 20/15 vision, they can see at 20 feet what a person with normal vision would need to be at 15 feet to see clearly.

At OCL Vision, we're here to discuss your options and guide you towards superior visual clarity. Most of our patients experience better vision than they used to before with glasses or contacts.

PATIENT TESTIMONIALS

"I received exceptional service at OCL Vision from the moment of my first consultation.

Unlike another clinic that advised me against laser eye surgery, the team at OCL correctly identified that I was suitable for ICL surgery, a procedure I had never heard of.

The procedure was a success for my right eye, and my left eye, which had a more complex prescription, was corrected with surface laser treatment at no extra cost.

I went from severe short-sightedness and astigmatism to perfect vision in both eyes, and I couldn't be happier with the results.

The aftercare was outstanding, lasting over two years. I highly recommend OCL Vision for anyone considering vision correction - **my experience has been life-changing.**

Nikki

"I've worn glasses since the age of 6, and my vision issues prevented me from doing many things I wanted, like diving and contact sports.

With a prescription of -18/+3 astigmatism in my left eye and -16.5/+3 astigmatism in my right, I was always told I wasn't a candidate for laser surgery due to the severity of my prescription.

In June 2019, I visited OCL Vision after a referral from a retinal specialist. I was sceptical, but after my consultation, **I was amazed when the surgeon confidently said he could give me 20/20 vision.** I researched the EVO ICL

technology, and after learning more, I booked the surgery.

The care I received from the team was exceptional. The surgery was painless, recovery was quick, and the aftercare was outstanding - my surgeon even accommodated me on a Saturday to check my vision.

Now, I can enjoy everyday activities like swimming with my baby without worrying about glasses. **I have better than 20/20 vision, and the change has been truly life changing.**
